

KENWOOD RADIOS - EASY COMMUNICATION FOR YOUR JOB

Light | Robust | Affordable | Durable | Intuitive

The PKT-23E radio from Kenwood: designed and built to meet the highest demands, intuitive to use and yet affordable. The ideal solution for your team communication in retail, gastronomy, logistics and industry. Do you already know ratiotec products from the area of cash management? We are convinced that together with our strong partner Kenwood, we are able to offer the same quality in the field of team communication. Naturally in connection with our usual fast service directly from Essen.

Easy to manage, robust and intuitive to use

With the handy PKT-23E you always have a grip on your communication. It fits perfectly in the hand and thanks to the buttons on the front, it is robust and easy to use. At 110 grams, it is very lightweight and can be comfortably carried in your pocket or on your belt. The PKT-23E also meets the IP54 standards for protection against dust and water.

Long service life, long range

The PKT-23E has a powerful lithium-ion battery with a capacity of 1430 mAh. With an active power saving function it enables an operating time of up to 15 hours (5% transmission, 5% reception, 90% standby). With the 500mW transmitting power and the receiver circuit optimised for the attached antenna, the PKT-23E has a radio range of up to 6 km.

8 channels with voice announcement & call alarm

The PKT-23E can use up to 8 channels which can be assigned for example to different departments. Each time the channel is changed the user is informed by a voice announcement. When a call comes in the PKT-23E informs the user visually (coloured LED display) and acoustically (signal tone).

Radio & headset - the ideal combination

A headset can be connected via the 3.5 mm audio jack. In addition, the built-in VOX function (Voice Operated Exchange) enables the radio to be voice controlled. Thus, you can switch it to send or transmit using the voice commands or at the push of a button and your hands stay free for more important things.

Three-colour LED & micro USB connection

The tri-colour illuminated or flashing LED display shows the send and charge status of the battery. The PKT-23E can be easily charged with a normal USB charger via the micro USB connection. Charging with the quick charging station included is even faster.

Ready for operation

We deliver the PKT-23E with German voice guidance. The channel frequencies, QT tones and DQT codes can be set by the user without using special programming software. The PKT-23E is ready for immediate operation!
